Product Designer with 10 years in complex, trust-critical systems. Proven track record in enterprise SaaS, regulated clinical software, consumer marketplaces, and AI-assisted products, with measurable outcomes across conversion, traffic, and operational efficiency.

EXPERIENCE

Independent Product Designer

October 2025 – Present

- Designed and built Verdict AI, a human-in-the-loop content moderation tool where evidence is surfaced transparently, unverifiable cases route to human review, and proper noun detection flags potential conflicts
- Ran sentiment, log-odds ratio, and similarity analyses on flagged reviews; found no single signal was sufficient and designed a rule-based engine that evaluates them together

MH Sub I, LLC dba Internet Brands

Remote / New York, NY

Associate Product Manager, Product Design

June 2021 – September 2025

- Designed Review Responder, an AI-assisted tool helping property managers respond to resident reviews; the feature grew to drive ~33% of the product's revenue
- Built the notification system for Exchange, a B2B platform, from zero: designed a 3-layer architecture (events, alerts, notifications) serving 7 product domains, and aligned 12 business-line stakeholders on alert logic and delivery rules
- Ran a pivot table analysis on flagged reviews and found that being reported 3+ times for the same reason sat 3 standard deviations above the norm; used that signal to build a statistical filtering system that reduced monthly abuse tickets by 30%
- Spotted an SEO insight from a cross-team meeting and pitched a design change no one had prioritized: added a top-review quote to listing cards, A/B tested across two surfaces, and found an 11% CTR lift on the index page, leading to a full rollout
- Owned onboarding improvements including “Sign up with Apple,” increasing new user registrations by ~4% (~4,000/month)
- Redesigned an overlooked content section (a renter's article library) to fix recurring UI issues, which ended up becoming a major organic traffic driver, increasing referring domains from 7.5K to 11.1K

Indigo BioAutomation

Carmel, IN

User Interface designer

June 2020 – June 2021

- Designed the review and dashboard experience for ASCENT, a hosted SaaS platform for chromatography and mass spectrometry data analysis used by clinical and life-science laboratories, translating raw scientific data into interfaces analysts could act on
- Worked directly with a specialty diagnostics client (The Binding Site) to shape exception-based review workflows, letting lab technologists focus attention on results that violated quality rules instead of reviewing every batch by hand
- Built a reusable UI component library with multi-state patterns, improving design consistency and engineering handoff efficiency in an ISO 13485 regulated environment

EMCT Inc.,

Taipei, Taiwan

Product Designer

May 2013 – July 2018

- Led end-to-end design of a large-scale data visualization platform integrating 45+ data sources, enabling government stakeholders to interpret complex information and make informed decisions
- Owned UX strategy across 17 web and 11 mobile products; redesigned a public-facing mobile application, increasing ratings from 3.0 to 4.4 and scaling active users from 10K to 360K

ADDITIONAL

- Winner, AT&T FirstNet Hackathon; Seed & Progress Round Winner, Tech to Protect Challenge
- PMI-CPMAI (AI/ML for Project Management)
- App Academy, Software Engineering Program
- Skills: Design Systems, Data-Informed Design, A/B Testing, Information Architecture, Accessibility (WCAG/ADA), Designing for Data-Heavy & Regulated Systems, Stakeholder Alignment
- Tools: Figma, Framer, Miro, Hotjar, Optimizely, Jira, Confluence, Streamlit

EDUCATION

M.S. Human-Computer Interaction, Indiana University (Aug 2018 – May 2020)

B.S. Geography, National Taiwan University (Sep 2004 – Jun 2009)
