

I Ting Tseng

339-368-0897 | tifny7574@gmail.com | <https://www.linkedin.com/in/ittseng> | <https://ittseng.co/>

Product Designer and former APM with 6+ years of experience in complex, trust-critical systems. I work best in ambiguous spaces — I'd rather build something rough and learn fast than wait for perfect information. That instinct has shaped how I approach everything from statistical moderation logic to end-to-end product strategy.

EXPERIENCE

MH Sub I, LLC dba Internet Brands

Remote / New York, NY

Product Designer (formerly Associate Product Manager)

June 2021 – September 2025

- Reframed roommate matching from a listing problem to a trust problem, then discovered the deeper constraint: design can't solve a cold start problem. Reached ~1% conversion (~10% of the addressable ceiling), knowing the gap was set by market density, not UX
- Designed a 3-layer notification system (events → alerts → notifications) across 7 product domains, separating system state from delivery to reduce noise and surface high-impact signals, aligning 12 cross-functional stakeholders on alert logic, delivery rules, and user eligibility
- Ran a pivot table analysis on flagged reviews and found that being reported 3+ times for the same reason sat 3 standard deviations above the norm — used that signal to build a statistical filtering system that reduced monthly abuse tickets by 30%
- Spotted an SEO insight from a cross-team meeting and pitched a design change no one had prioritized — added a top-review quote to listing cards, ran an A/B test across two surfaces, and found an 11% CTR lift where we least expected it (the index page, not the review page), leading to a full rollout
- Owned onboarding improvements including “Sign up with Apple,” increasing new user registrations by ~4% (~4,000/month)
- Redesigned an overlooked content section (a renter's article library) to fix recurring UI issues, which ended up becoming a major organic traffic driver — increasing referring domains from 7.5K to 11.1K

EMCT Inc.,

Taipei, Taiwan

Product Designer

May 2013 – July 2018

- Led end-to-end design of a large-scale data visualization platform integrating 45+ data sources, enabling government stakeholders to interpret complex information and make informed decisions
- Owned UX strategy across 17 web and 11 mobile products, improving usability, adoption, and cross-platform consistency
- Redesigned a public-facing mobile application, increasing ratings from 3.0 to 4.4 and scaling active users from 10K to 360K

PROJECTS — AI & DECISION SYSTEMS

Verdict AI — Hybrid Moderation System

Personal Project (Based on real-world moderation experience)

October 2025 – Present

- Rebuilt a work moderation system three times — from a statistical threshold method, to an AI classifier, to an evidence-first rule engine — each iteration driven by the previous version's failure to give reviewers confidence, not just answers
- Ran three data analyses (sentiment, log-odds ratio, similarity) to understand what makes flagged reviews suspicious; found that no single signal is sufficient — coordinated reviews only become visible when sentiment, language patterns, and similarity are read together
- Built Verdict AI v2.0 as a rule-based, human-in-the-loop system where keywords were derived from log-odds analysis, unverifiable flag reasons route to human review, and proper noun detection surfaces potential name or community references for manual verification

ADDITIONAL

- *Award:* Winner, AT&T FirstNet Hackathon; Seed & Progress Round Winner, Tech to Protect Challenge
- *Certification:* PMI Certified Professional in Managing AI (PMI-CPMAI)™ (2025–2028)
- *Skills:* **Product Design & Strategy** — Human-Centered Design, Product Thinking, UX Strategy, Interaction Design, Information Architecture, Journey Mapping, Wireframing, Prototyping. **Research & Data** — User Research, Usability Testing, Data-Informed Design, Analytics (GA, GTM), Designing for Data-Heavy & Regulated Systems. **Collaboration & Communication** — Cross-Functional Collaboration, Stakeholder Alignment, Design Facilitation, Design Storytelling, Agile / Lean UX. **Systems & Technical** — Design Systems, Scalable UX, Accessibility, Technical Constraints Translation. **Tools** — Figma, Axure, Miro, Hotjar, Optimizely, UserTesting, Lucid Chart, Adobe Creative Suite, Jira, Confluence, Midjourney, Streamlit

EDUCATION

M.S. Human-Computer Interaction—Indiana University (2020)

B.S. Geography—National Taiwan University (2009)
